

Raising domestic chickens

Optimize your birds' performance with Agrizone feed!

Make sure you're ready for your chickens!

Laying hens

1 Make sure the area is cleaned, disinfected and dried before the birds arrive. Be sure to use enough bedding.

2 Provide enough feeders for all the birds to feed at once and have as much as they want. Adjust the height of the feeders so they are as high as the middle of the chickens' backs.

3 Make sure the birds empty the feed hoppers once a day. Clean the hoppers regularly.

4 Store feed in a cool, dry place.

Temperature

After the starter period, chickens will be most comfortable at a temperature between 19 °C and 21 °C (66 °F and 70 °F). Anything outside that will be detrimental to their well-being. You can use a heating system to keep the temperature as consistent as possible.

Water

Chickens must have access to clean, fresh water at all times. Drinking troughs must be cleaned regularly and their heights adjusted so that birds can access them easily.

Lighting

Once your chickens are 18 weeks old, increase the light period by 30 minutes each week until you reach 16 hours per day. We recommend one 25-watt bulb per 25 m² (270 sq. ft.) of space.

Bedding

There should always be 5 cm to 10 cm (2 in. to 4 in.) of litter on the ground. Remove wet or soiled bedding and add more as needed.

Feed

Give your chickens 100 g to 120 g (3.5 oz. to 4.2 oz.) of feed per day, per hen. They should also have access to insoluble grit at all times.
